

## Robust protection with a natural response and integrated high fidelity speakers

The PRO Communicator offers the best of both worlds combining our flat response high-noise hearing protection with the same high-fidelity speakers as used in our Evoke Studio in-ear monitors. The PRO Communicator allows those working in high noise environments to stay in touch and in tune with their surroundings and also connect to monitoring and communications systems with confidence for crystal clear communications and highly accurate monitoring. The PRO Communicator gives you control of your sound environment and allows you to perform in complete comfort and safety using the most natural filters and speakers available.

## Hear everything you need to and nothing you don't

The PRO Communicator is a revolution in in-ear monitoring and communication solutions offering both hearing protection and audio playback of the highest fidelity. The PRO filters gives optimum protection in high-noise environments keeping all the frequencies you hear in perfect balance but at safe levels, using the latest filter design techniques it also keeps your own voice sounding perfectly natural, aiding communication. For audio playback the PRO Communicator uses the same highly accurate speaker that we use in our Evoke custom in-ear monitor giving you rich and detailed sound for both vocal communications and music monitoring making it perfect for all kinds of audio sources, finished with a 3.5mm stereo connector you'll also have no trouble connecting it to whichever equipment you like. The PRO Communicator gives you the ability to work in confidence in the loudest of environments knowing that what you hear is precisely accurate whether it's your audio feed or the sound in the world around you.

## The next generation of filter design

The PRO filter series has been designed anew with the wearer in mind. For starters, it's smaller than many competing filters which means it can fit into smaller ears without any protrusion which is great for both comfort and aesthetics because it will always fit snugly underneath a helmet. The filters are also user-swappable so you can chop and change as your environment demands to any other filter in the PRO range giving you complete control over your protection with just a single set of earmoulds. In addition, the PRO series are water resistant so they can be used outside or in high moisture environments and can withstand perspiration without it damaging the filter membrane.

## Technical Specifications

<b>No. of Drivers</b>	1
<b>Build Material</b>	40 Shore, custom fit, medical grade silicone moulds finished with a hard wearing flexible lacquer
<b>Mould Type/s</b>	Canal Mould as standard – Full Concha option
<b>Cable Exit Options</b>	Top (over-ear) – Bottom (straight down)
<b>Cable Type</b>	ACS Clear Kevlar Cable
<b>Standard Cable Length</b>	1.4m
<b>Standard Connector</b>	Low profile right angled 3.5mm stereo
<b>Frequency Range</b>	40hz-20Khz
<b>Sensitivity @ 1Khz</b>	105.5db
<b>Impedance @ 1Khz</b>	50ohms
<b>Items Included</b>	Carry pouch, wax pick, care and usage instructions, comfort cream,
